

Training — Steering by value

A one-day in-house session to install steering that decides: read real capacity, arbitrate, hold the course. Participants leave with the toolbox templates.

- 1. Reading your portfolio.** One single source, the Build/Run balance against target, the real capacity of the IT department — diagnosis before method.
- 2. Arbitrating with a single grid.** The arbitration grid applied to participants' real cases: "In offsets Out", induced Run N+1 costs, decisions that come out of the meeting.
- 3. The dashboard that decides.** Planned / actual / to complete, a status colour justified by a figure, and the "expected decision" column.
- 4. Risks and governance.** A register of fifteen lines maximum, named owners, and a committee whose agenda is arbitration — not status review.

Format: in-house • one day • 12 participants maximum • CIO teams, PMOs, project managers, domain leads
