

Master plan — scenario evaluation grid

The common reference that makes IT or HRIS master-plan scenarios comparable — then gets two of them arbitrated, not five.

CRITERION	WEIGHT	SCENARIO A	SCENARIO B	SCENARIO C
Employee / user journey				
IS rationalisation				
Data control				
Scalability				
Induced RUN costs (N+1)				
Project cost and risk				

Scoring: 1 to 4 per criterion, weights decided BEFORE scoring

- One COMMON reference for every scenario — otherwise you are comparing impressions.
- Induced RUN N+1 costs (SaaS licences, outsourcing, decommissioning) are made explicit per scenario, before arbitration.
- Frame the funnel: examine five scenarios, get two arbitrated.
- Decisions come out of the meeting, not the corridors.
